Experience

- Online chat

Authorization was done using a Google account (from the same place the name and avatar are taken), Firebase was used as a database for saving messages. Using: React, Firebase, Material-ui

- Crypto converter

The application shows the current price of popular currencies taken from the API (cryptocompare.com), you can also select two currencies, and see how much of one currency is contained in the other
Using: TypeScript, React, MobX, axios

- Mini Projects

As this project, I put a repository where I put small projects made in pure CSS and JavaScript, without using libraries.

Languages

Russian – C2(Native)

English – A2(Pre-Intermediate)
